

Wenesco Hot Plates

High Uniformity Hot Plates

Wenesco high uniformity hot plates feature remote digital thermostats to control the plate temperature. Current temperature and set point are digitally displayed. Low watt density heater elements distribute heat evenly across the plate. Typical temperature uniformity is 1-2% of set point, See example uniformity grids below.

All uniform hot plate surfaces feature less than .005 in. surface deviation. This can be improved to .001 in. on special order.

High uniformity is available in most standard hot plates listed on Page 1. We also custom build special uniform hot plates.

Plates for Wafer Production

Hot plates with

- ◆ vacuum chucks
- ◆ gas-tight covers for nitrogen or vacuum
- ◆ lift pins for contact or proximity baking
- ◆ heat-cool feature

Vacuum Chuck Hot Plates
